FOREWORD

Lotanna's invention first drew my attention in 2011, when I was finalising a chapter on individual writing systems in our – mine and Jason Glavy's – book on modern African scripts. We “met” with Lotanna on Facebook in the early 2011.

Since then, the Ndébé script has matured substantially. There are several features that make this writing system significantly richer than a simple character mapping: the systematic tone marking, the notation of numerals, which is not positional but can potentially become so, and an extended set of punctuation marks.

The most interesting feature of Ndébé, in my opinion, is the use of “mutation syllables” that make it possible to eliminate consonant variation between dialects by representing them with unique symbols.

I wish Lotanna much success with promoting her invention!

— **Andrij Rovenchak**, *Professor at the University of Lviv*

1.

A LOVE LETTER TO ÌGBÒ PEOPLE

Nobody knows when Ìgbò began. Nobody knows how old Ìgbò people are. Our history, our successes, our tragedies, our culture, our stories; all passed away silently into the universal void because as far as modern history can tell, we never really wrote it down.

And what is not written down, cannot be passed on to others, cannot outlive us, and cannot outlast time.

“WE HAVE SEEN THEIR SOULS BECAUSE THEY WROTE IN A SCRIPT ALL THEIR OWN”

This project to develop a truly indigenous Ìgbò writing system has been over decade of work to ensure that the private and collective existence of Ìgbò people leaves its stamp in history.

We are transported to the lives of others in far away foreign lands, and we know of their deeds and doings, because they wrote, but most of all, we have heard their true voices, and seen their souls because they wrote in a way most meaningful to themselves, in a script completely their own.

I have created this script for Ìgbò in the hope that Ìgbò people might express themselves more deeply, and more

dozie@fronte.io

distinctly from the rest of the world, amidst whose cacophony our voices are currently being drowned out.

And that through this shared possession: a beautiful, elegant, and efficient form of writing, that we may forge and cultivate a deeper, more refined, nuanced, and more sophisticated ìgbò identity.

Through the gift of this script from myself to my people, I mean to fling open the door to the evolution of our language.

That like all true living languages, ìgbò might once more adapt and grow, with the coinage of novel words and expressions to fit and describe our new modern reality.

With mastery of writing, reading, and ìgbò calligraphy, naturally will follow mastery and innovation in our ìgbò language.

A writing system all our own is only the first step to becoming the ìgbò people we dream we can be.

The Nǎdẹ́bẹ́ script will open and illuminate the path to the cultivation of new ìgbò high arts.

Everything begins with a dot.

So, write.

2.

PUNCTUATION

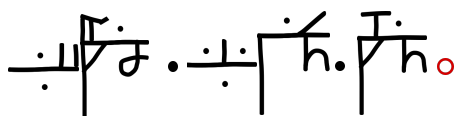

It might seem odd to start a book about a writing system with its punctuation, but punctuation is important and oft overlooked, so this is a very good place to begin.

Ìgbò has a lot of deliberate pauses which are unnatural in English, and normally would be filled with a conjunction.

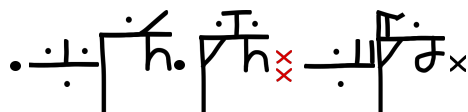

While conjunctions also exist in Ìgbò, it is inappropriate to use them to fill up these pauses in Ìgbò, which are a feature of the language by design.

Nḍẹ́bẹ́ includes punctuation to accommodate this and other features of Ìgbò.

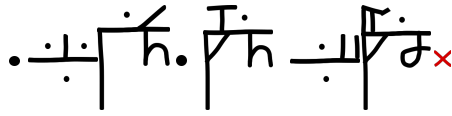

Pauses are denoted by a circle.

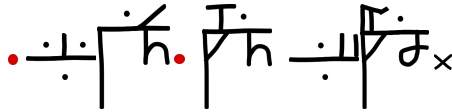

Commands stress and elongate the final vowel e.g. Go in command form is Goo, and this elongation is denoted on Go as a double x.

Full stops are an x.

Names should always be highlighted by an interpunct on both sides.

Questions and exclamations can be indicated with the question mark (?) and exclamation mark (!) provided in the Latin alphabet.

3.

NUMBERS - 0 TO 9

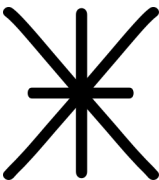

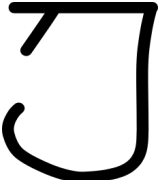

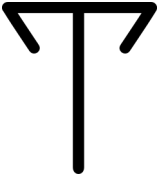

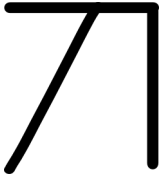

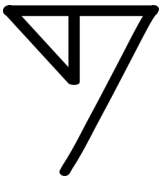

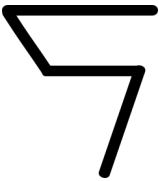

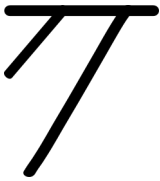

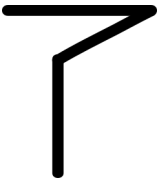

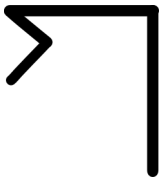

Ídẹbẹ́ introduces unique characters for the numbers listed in the chart below.

Due to British colonial influence, modern Ígbò has deviated from its original Base-20 style number system, to adopt the British style Base-10 system.

The original system is hallmarked by a special name for twenty, and subsequent major numbers named as multiples of twenty, or by their relation to twenty.

Thirty for instance is **ogu ili** (literally twenty and ten), forty is **ogu nabo** (literally twenty twice).

From 0 to 9, numbers stand alone.

				
0	1	2	3	4
				
5	6	7	8	9

Sold to

dozie@frontrio

4.

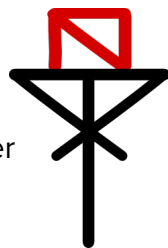

NUMBERS - 10 TO BILLIONS

Numbers in Ndëbé can be written in either system.

							
10	20	100	1000	10,000	100,000	1 Million	1 Billion

In order to qualify numbers ten, twenty upwards to a billion, number diacritics are used.

e.g. Fifty is a combined character made up of the character for ten, and a diacritic version of the number five.

Fractions are denoted as in the Latin system, with dot notation.

Number Diacritics

							
2	3	4	5	6	7	8	9

Number diacritics exist for numbers two through nine. These characters are shown above.

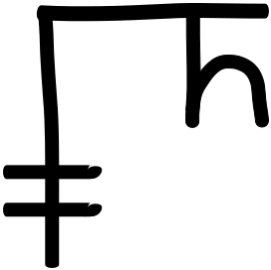

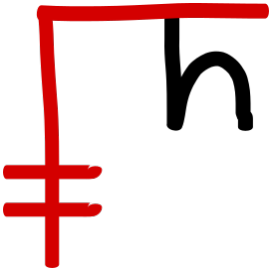

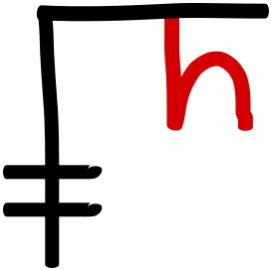

5.

CONSONANTS

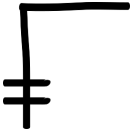

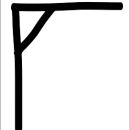

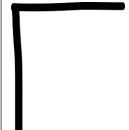

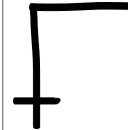

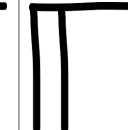

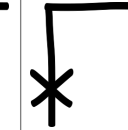

Consonant characters are formed by a combination of a stem and a radical.

Stems represent the sound group to which the consonant belongs, while the radical differentiates each sound within the group.

Combined, they represent all the ìgbò consonant sounds.

		
Consonant	Stem	Radical

There are six stems:

					
---	---	---	---	---	---

And seven radicals:

l h o l 7 o +

In Ñdèbẹ́, sounds are grouped properly, by connecting the sounds which are pronounced interchangeably by speakers of different dialects, as one character.

Consonant Characters							
	ㄥ	ㄏ	ㄆ	ㄌ	ㄎ	ㄋ	ㄗ
ㄱ	ㄱㄱ	ㄱㄏ	ㄱㄆ	ㄱㄌ	ㄱㄎ	ㄱㄋ	ㄱㄗ
	MM	GB	KP	B	P	BY	M
ㄲ	ㄲㄱ	ㄲㄏ	ㄲㄆ	ㄲㄌ	ㄲㄎ	ㄲㄋ	ㄲㄗ
	G/V	G	N/L/Y	GW	K	KW	N
ㄳ	ㄳㄱ	ㄳㄏ	ㄳㄆ	ㄳㄌ	ㄳㄎ	ㄳㄋ	ㄳㄗ
	R/H	D	L/R	Y/H	R	Y	L
ㄴ	ㄴㄱ	ㄴㄏ	ㄴㄆ		ㄴㄎ	ㄴㄋ	ㄴㄗ
	F/H/SH	CH	NN		S/SH	J	B/V
ㄷ	ㄷㄱ	ㄷㄏ	ㄷㄆ	ㄷㄌ	ㄷㄎ	ㄷㄋ	ㄷㄗ
	S	T	F/P	F	Z	B/W	S/T
ㄸ	ㄸㄱ	ㄸㄏ	ㄸㄆ	ㄸㄌ	ㄸㄎ	ㄸㄋ	ㄸㄗ
	F/V	Y/GH	R/F	W	W/GH	NY	N'

6.

VOWELS

Each of the three tones has its own character to ensure the tone of the word is read consistently.

When a word begins with a vowel, or a **vowel stands alone**, it has a dot underneath to indicate its status as a standalone vowel.

When vowels are used in syllables, they sit on top of the consonants as diacritics, and **have no dot below**.

N / M AS VOWELS

The N / M sound is special in Ìgbò because it is treated as a vowel, taking on a tone at the beginning or end of words or when standing alone.

As such, in Ñdẹ́bẹ́, it is represented similarly to true vowels, except that it has no diacritic form and is always represented as standalone vowels are.

High	Rising	Low

	HIGH	RISING	LOW
A			
E			
I			
O			
U			
E			
I			
O			
U			

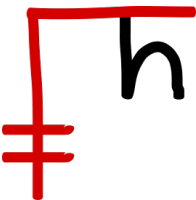

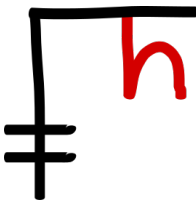

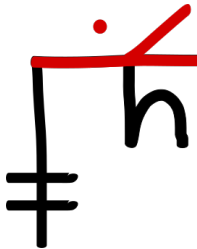

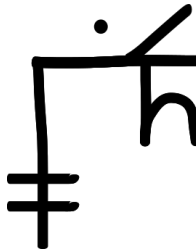

All vowel characters are shown in the chart above.

7.

SYLLABLES

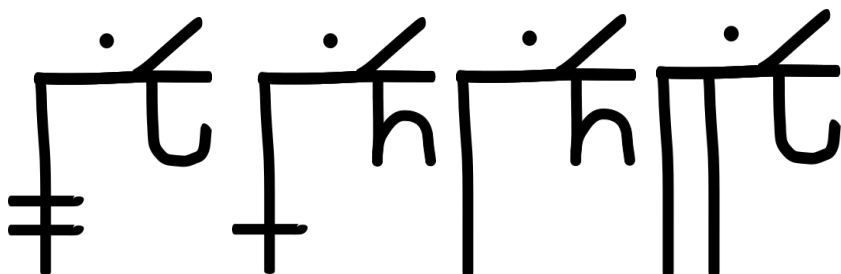

Ídèbè groups the sounds in Ìgbò into syllables such as Gba, Fa, Ma, etc, rather than individual letters such as A, B, or C.

Each syllable is represented by a written character, made up of 3 parts: Stem, Radical, and Diacritic.

			
Stem	Radical	Vowel Diacritic	Syllable

Combined, all three parts make a syllable sound.

Hence, different combinations produce different sounds.

Ba

Cha

Da

Fa

8.

THE SYLLABARY

Ndẹbẹ is deliberately designed to make it impossible to write without considering tone.

Before writing each word, you must know or investigate its tone in order to select the correct syllable.

Additionally, the syllabary is divided into Fixed Syllables and Mutating Syllables.

Fixed syllables represent sounds which are always the same regardless of who the speaker is or where they are from.

Mutating syllables represent sounds *which are different* for ìgbò speakers *from different regions or of different dialects*.

For instance, speakers of Onitsha-variant ìgbò say Ụnò, while speakers of Owerri-variant ìgbò say Ụlò to mean building.

The N and the L in this word are interchangeable sounds in ìgbò, and as such, are represented as a single mutating character in Nẹ́dẹ́ - the **Nò** / **Lò** character.

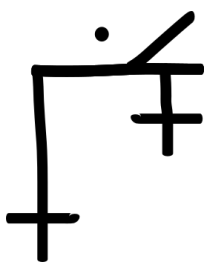

Written in Nẹ́dẹ́, the word Ụnò / Ụlò will always look the same, but speakers of different dialects ***should read it differently*** by associating the Nò sound with the character if an Onitsha-variant speaker, and the Lò sound with the character if an Owerri-variant speaker.

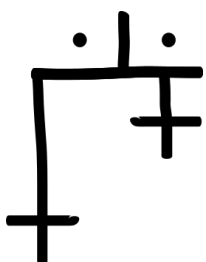

Ụnò / Ụlò

GWA

A stylized Ndebe symbol for 'Gwá'. It features a vertical line on the left, a horizontal line across the middle, and a curved line on the right that ends in a hook. A dot is positioned above the horizontal line.

Gwá

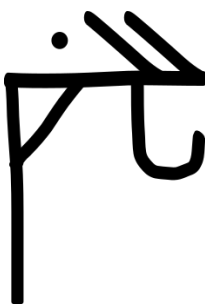

A stylized Ndebe symbol for 'Gwa'. It features a vertical line on the left, a horizontal line across the middle, and a curved line on the right that ends in a hook. Two dots are positioned above the horizontal line.

Gwa

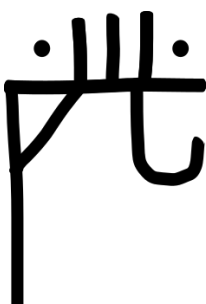

A stylized Ndebe symbol for 'Gwà'. It features a vertical line on the left, a horizontal line across the middle, and a curved line on the right that ends in a hook. A dot is positioned above the horizontal line.

Gwà

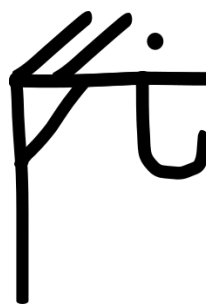

GWĚ

A stylized Ndebe symbol for 'Gwé'. It features a vertical line on the left, a horizontal line across the middle, and a curved line on the right that ends in a hook. A dot is positioned above the horizontal line.

Gwé

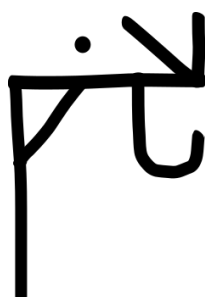

A stylized Ndebe symbol for 'Gwe'. It features a vertical line on the left, a horizontal line across the middle, and a curved line on the right that ends in a hook. Three dots are positioned above the horizontal line.

Gwe

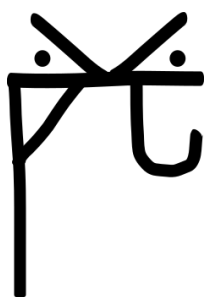

A stylized Ndebe symbol for 'Gwè'. It features a vertical line on the left, a horizontal line across the middle, and a curved line on the right that ends in a hook. A dot is positioned above the horizontal line.

Gwè

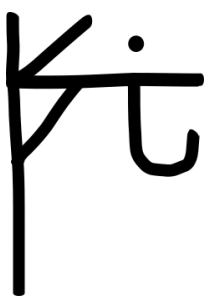

GWỊ

A stylized Ndebe symbol for 'Gwí'. It features a vertical line on the left, a horizontal line across the middle, and a curved line on the right that ends in a hook. A dot is positioned above the horizontal line.

Gwí

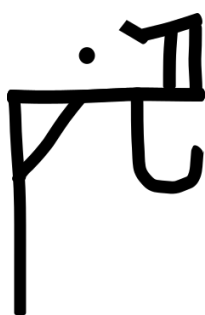

A stylized Ndebe symbol for 'Gwi'. It features a vertical line on the left, a horizontal line across the middle, and a curved line on the right that ends in a hook. Two dots are positioned above the horizontal line.

Gwi

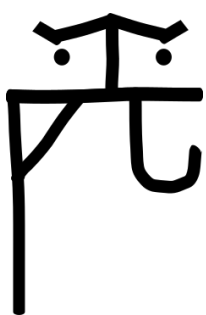

A stylized Ndebe symbol for 'Gwì'. It features a vertical line on the left, a horizontal line across the middle, and a curved line on the right that ends in a hook. A dot is positioned above the horizontal line.

DEVELOPMENT

IN THE BEGINNING

Ídẹbẹ began as an idea borne out of frustration and disappointment with my own handicaps at the time in expressing myself in ìgbò.

	l	m	n	u	y	b
ɔ	ɔ̃	ɔ̃	ɔ̃	ɔ̃	ɔ̃	ɔ̃
	KW	NW	NY	W	Y	GW
ɔ̃	ɔ̃	ɔ̃	ɔ̃	ɔ̃	ɔ̃	ɔ̃
	J	SH	GH	S	Z	H
ɔ̃	ɔ̃	ɔ̃	ɔ̃	ɔ̃	ɔ̃	ɔ̃
	D	CH		L	R	T
ɔ̃	ɔ̃	ɔ̃	ɔ̃	ɔ̃	ɔ̃	ɔ̃
	M	N		G	K	N
ɔ̃	ɔ̃	ɔ̃	ɔ̃	ɔ̃	ɔ̃	ɔ̃
	V	GB	KP	B	P	F

I had noticed all my life that while friends and acquaintances from other ethnic backgrounds had a fluid ease with their languages both in speaking and writing, ìgbò people were most likely of the people I knew and met to eschew their own language for the ease and flexibility of English.

Even in the heartland of Eastern Nigeria, where I grew up, we spoke ìgbò but people almost never wrote in ìgbò outside of school for exams.

Determined to solve the problem of broken ìgbò writing, at the end of 2008, I began to play with the idea of creating a functional script for daily use with which to write ìgbò, by adapting Nsibidi into a logographic writing system.

I soon realised that while beautiful and culturally and historically compelling, Nsibidi was impractical for broad, daily use, and at first I compromised in setting out to create a script that could be used to supplement

	Hog	Ring	hoo
A	...	...	...
E	...	...	...
I	...	...	...
E	...	...	...
O	...	...	...
O	...	...	...
U	...	...	...
U	...	...	...

Sold to
dozie@fronte.io

Nsibidi, the way Hiragana and Katakana are used to supplement Kanji in written Japanese.

Thus the first version of the Ndébé script was born in my college dorm room in 2009.

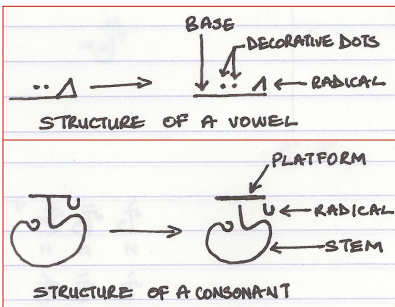

Originally, I designed it as an alphabet, but upon later reflection, I realised that by doing so, I would simply be perpetuating the problems of the Latin based Onwu orthography which have plagued Ìgbò since major attempts were made to adapt Ìgbò for writing.

The problems of widely variant dialects, different spellings, and how to represent tone in a way that isn't cumbersome had gone unaddressed for centuries, if not aeons since Ìgbò first split into dialects.

In the course of my research into the writing systems of other languages for the development work I was doing for

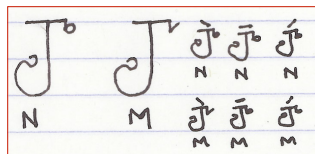

Ìgbò, I learned that many Chinese people still have difficulty with reading and writing Chinese because of the sheer number of characters in Hanzi, the Chinese writing system, and the need to memorise so many.

Sold to
dozie@fronte.io

This put a halt to the development of new characters I was creating to augment Nsibidi, because it became increasingly clear to me, that if memorisation was the sole means of learning the script, it would quickly fail.

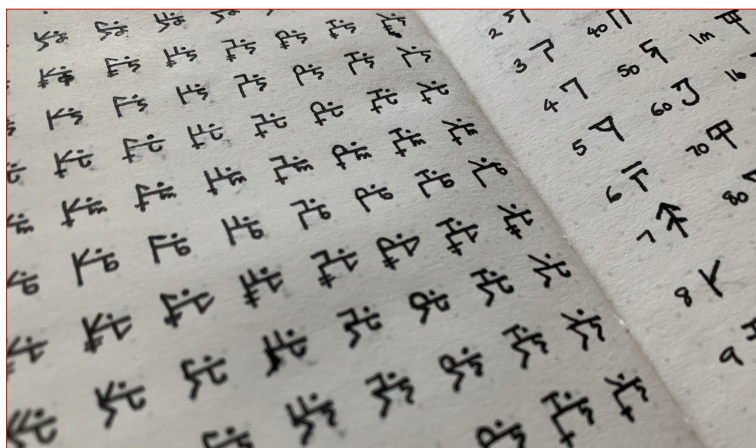

The Chinese have always had a succession of Emperors to enforce literacy amongst the common people through sheer will and force of might.

Though I might like to be, I am not a ruling Empress.

I then resolved to completely redesign the Ñdẹbẹ writing system from the ground up with the aim of incorporating logic to address the aforementioned problems with writing Ìgbò in mind.

The result is a script that is thoughtful, intentional, easy to learn and use, and visually stunning.

I created something that would give me a sense of enjoyment, serenity, and beauty using every day, and I made it for all of you.

AFTERWORD

I met Lotanna at an event in New York City in the summer of 2009. She was in college then, and she expressed an unusual interest in writing systems and letterforms.

That interest was fostered by a love for languages very early in her life. She learned Spanish and took her SATs in Spanish, doing exceptionally well.

She showed more than a fleeting interest in my book, *“Afrikan Alphabets: The Story of Writing in Afrika”* and proffered that she actually had created a writing system for her language Ìgbò.

I was impressed but not surprised because in Afrika, most of the writing systems and scripts were not invented by designers, just everyday people who had a desire to create a writing system for their people.

Lotanna told me she was inspired by Sejong, The Great, the Korean King who was unhappy that his people were forced to use Chinese writing and decided that his people deserved their own writing system.

He then got all the wise men in his kingdom to create a writing system and in 1443 *Hangul* was born and is still in use today. It is so brilliant that it has won the accolade of “the most scientific script in the world”.

It gave Koreans a sense of self-pride and up to this day, it unifies the North to the South when ideological differences have split the nation.

It is my hope that Lotanna with *Ídẹ́bẹ́*, has given the Ìgbò people a writing system they will cherish and that will give

them that sense of pride through a writing system created by one of their daughters.

She plans to get it Unicode certified and eventually digitised into an actual font for use on computers by her people and others like me who have a vested interest in the writing systems of Africa.

It is a beautiful, clever, easy-to-use and functional writing system that will be used to write all forms of literature, correspondence, and taught in schools.

I am proud of Lotanna and wish her all the very best on her journey to make *Ndébé* a reality for her people.

— **Saki Mafundikwa**, *Director of the Zimbabwe Institute of Vigital Arts.*

ABOUT THE AUTHOR

Lotanna Igwe-Odunze is a writer and blogger, a deep thinker, a software engineer, and a lifelong fan of languages, reading, and linguistics.

In view of the importance she places in life on personal, cultural, and artistic self cultivation, she has championed various efforts to develop and refine different aspects of ìgbò culture into high arts, especially the ìgbò language itself.

To help the millions of ìgbò people who struggle with speaking gain a firm grasp and deepen their fluency, she created [SexyÌgbò](#), the easiest and most intuitive online ìgbò course in the world.

She invented the Ndebe writing system for ìgbò in 2009
